(54) MEASURE HAVING REDUCTION SCALE

(57)Abstract:

PURPOSE: To provide a measure having reduction scale, onto which seven or more different divisions of a scale size are given in one body.

CONSTITUTION: A measure having reduction scale 10 consists of a first and a second triangular scales 11 and 12. The first triangular scale 11 is the same as the conventional triangular measure. In the second triangular measure 12, an inserting hole 125, in which the first triangular measure 11 is suitable, is formed. On these two measures, twelve different reduction scale divisions can be given at the maximum. By fitting the first triangular measure 11 within the second triangular measure 12, both measures are handled as one body. When the reduction scale divisions 123 of the second measure 12 do not cover the requirements, the first measure 11 is pulled out so as to use the reduction scale division 113 made thereon.
